

T-Series

This range of films is made from robust Titanium and provides a value for money solution for varying levels of solar heat control requirements. As a metalised film, atoms of Titanium are deposited onto the film creating an effective solar heat reflective surface. The T-Series comes in a family of varying densities of Titanium. You can choose between lightly coated Titanium films to denser, more reflective layers depending on your individual needs.

T-Series Product Specifications

	T25	T35
Total Solar Transmission	19.0%	28.0%
Total Solar Absorption	57.0%	54.0%
Visible Light Transmission	23.0%	33.0%
Visible Light Reflectance	30.0%	21.0%
Shading Coefficient	0.41	0.50
Total Solar Energy Rejection	64.0%	57.0%
Ultraviolet Rejection	99.0%	99.0%
